Arcadian Rift is a challenging tabletop roleplaying game, where players can create their own unique character with choices for class, ability scores, and origin. The game uses an unconventional grid, which is 1 inch squares instead of being exactly 4 inches. In this way, characters are not as big, but they are balanced differently. This makes it easier to snap to the same space. Arcadian Rift is designed for mature audiences, and is intended to be played more like a pen-and-paper RPG, while being very much a computer game. SEVERAL YEARS AGO we released the game Super Stardust, which turned out to be really successful. With the release of the game we decided to turn Solar into what it should have been all along: something we wanted to play. And so it has been, ever since we reworked the project. Solar is inspired by Super Stardust, the original titles, but also by Elite, Marathon, Doom 3, Planescape: Torment, and of course by our own previous game Cornucopia 2. The game is a mix of progression systems and more open-world than what we had planned when we started in 2005. The game is often messy, so don't expect your system to be perfect. We tried to design the game so that it grows with you, but have a fair warning, your system will not look like the intended design at first. Our goal was to make a game in which the asteroid fields and planets could feel like locations rather than randomly generated objects, so the game isn't as deterministic as it is in other games. Some of the basic design ideas that we worked on for the past few years. ABOUT THE GAMES SDK The Solar Development Kit allows you to create your own games or apps in and publish them to the play store. Free The Solar 2 game is free-to-play and you can enjoy the core game for free without any of the in-app purchases. Solo The main purpose of the Solar 2 game is to grow your system and have fun. Collect In the Solar 2 game we have a lot of different objects that you can collect and trade in. Try to get an overview of all the collectibles in the Solar 2 game. Progression The Solar 2 game has a progression system and you can upgrade it over time. ABOUT THE PUBLISHER Today we are very happy to announce that we are developing a startup studio called SolarPixel Studio. We are planning to develop games, design games, and prototypes and proof of concepts. And we are also collaborating and partnering up with other game companies to develop other projects. The Solar Development Kit The Solar 2 Development Kit is the way we express our ideas, creativity, and the spirit of solar 2. The Solar 2 Development Kit is a documentation about what we are working on in the game and we are sharing it with you. So that you can
